

# 1-Month Backend Roadmap — Express.js & MongoDB

---

**Goal:** Learn backend development using Node.js, Express.js, and MongoDB in 1 month.

**Daily Study Time:** 3–5 hours

## Week 1 — Node.js & JavaScript for Backend

| Day   | Topics                                     |
|-------|--------------------------------------------|
| Day 1 | Node.js basics, npm, modules, package.json |
| Day 2 | File system, path module, events           |
| Day 3 | HTTP module and creating servers           |
| Day 4 | Async programming, promises, async/await   |
| Day 5 | Mini Project: Basic Node.js API            |

## Week 2 — Express.js Fundamentals

| Day    | Topics                            |
|--------|-----------------------------------|
| Day 6  | Express setup, routes, middleware |
| Day 7  | Request & response handling       |
| Day 8  | REST API development              |
| Day 9  | CRUD operations with Express      |
| Day 10 | Mini Project: Task Manager API    |

## Week 3 — MongoDB & Mongoose

| Day    | Topics                            |
|--------|-----------------------------------|
| Day 11 | MongoDB basics and collections    |
| Day 12 | Mongoose models and schemas       |
| Day 13 | Database CRUD operations          |
| Day 14 | Relationships and data validation |
| Day 15 | Connect Express with MongoDB      |

## Week 4 — Authentication & Real Projects

| Day    | Topics                                |
|--------|---------------------------------------|
| Day 16 | JWT authentication                    |
| Day 17 | Password hashing with bcrypt          |
| Day 18 | Protected routes and authorization    |
| Day 19 | Error handling and clean architecture |
| Day 20 | Deploy backend project                |

### Final Projects

1. Authentication System
2. Recruitment Management API
3. Expense Tracker Backend
4. Full Stack MERN Project

### Important Topics to Master

- REST APIs
- Middleware
- JWT Authentication
- MongoDB Queries
- Mongoose Models
- CRUD Operations
- Error Handling
- Backend Architecture

### Recommended Daily Routine

- Learn concepts
- Build APIs manually
- Test using Postman
- Revise previous topics
- Practice every day
